## Euro Scan Laser

**Euroscan** is an innovative detector with laser technology, which detects the maximum security measures incorporated into the Euro Notes.

Today, it is perfectly possible to imitate the coinciding marks, colours, patterns and holograms of banknotes.

To obtain a certain degree of reliability, all detectors need to analyse different security marks.

The technology used in the machine is completely new, and it is totally immune to the state of a banknote, lined areas, stains, wrinkles, washed, torn notes or notes that have been stuck with scotch tape. These are conditions that eliminate the reliability of other existing detectors on the market, leading to false authentications.

The **Euroscan** is extremely easy to use and combines maximum security levels in the face of fraudulent notes with minimum handling requirements.

### Detection Technology:

The Euroscan laser reads an unpublished code that verifies the note as being authentic.

### Specifications:

- Laser technology detector
- 230V supply
- Acoustic and luminous signals for authentic and false notes
- Digital volume adjuster
- EC Certification
- Absolutely reliable
- Minimum power consumption on standby between -different checkups
- 2 kg
- W180 x H60 x D190 mm

19 Turvey Business Centre, Turvey, County Dublin, Ireland
