Motorised Currency Detector

The Motorised Detector is the quickest and most accurate method of detecting forged notes, at the point of sale. This machine uses ICD (Intelligent Code Detection) to determine whether a note is genuine or counterfeit by searching for a code hidden inside the security thread.

Detection Technology:

- When a valid note is passed through the machine the value of the note will be displayed on the screen. It will also count the amount of notes been checked by the user.
- When a forged note is passed through the machine, it will be rejected and an alarm buzzer sound and will not display a value.

Specifications:

- Easy to operate, any direction and any side of note can be read.
- ICD (Intelligent Code Detection), Infrared Ink and Length detection.
- High speed: 0.2 Secs/Note
- Multi-currency optional: Euro, British Pound etc.
- Denomination & total sheets indicator.
- Small and compact, ideal for business where counter space is tight.
- 1 kg.
- 221 x 132 x 85 mm
