TN10 One Pocket Note Counter

Description

The TN10 is the smallest machine in its category. Nevertheless, it has the highest hopper capacity (600 notes), which means up to 50% less feeding required and more time for other tasks.

Detection System With 3 Layer Profile

The TN10 scans 3 layers of the banknote in full size. As the scan does not rely only on optical detection, the highest level of protection is provided, especially for notes in visibly poor condition.

The full size detection system gives this unit an advantage where software upgrades are required, such as in the case of the changeover to Euro Series 2 banknotes.

CashDNA® also incorporates standard detection systems as UV, MG and IR. The CLIS image sensor does not require physical contact to the note as a conventional CIS sensor would, making the unit much less sensitive to damage by foreign objects such as staples or paperclips.

Ready To Network

The TN10 comes with a network interface. Updates, apps and additional currencies can be downloaded via the internet connection.

Remote maintenance support, where available, (select markets only) can also decrease maintenance costs.

PRODUCT SPECIFICATION

Detection	UV, Full size IR (CLIS) & MG cashDNA®
Speed	800...1,500 notes/min
Currency	Multi-currency on enquiry (e.g. EUR, USD)
Capacity	Hopper: 600 notes Stacker: 200 notes
User interface	3.5" colour, touch display
Connectivity	LAN, USB, RS232, external printer and display
Update	SD-Card, LAN
Dimension	225(D)x265(W)x210(H) without note guides
Weight	5.4 kg
Power	110...240 VAC
Approvals	CE, RoHS, ECB, other national bank certifications on request

Unit 19, Turvey Business Centre, Turvey, Co. Dublin
