DP-2258 Motorised Currency Detector

Description

The DP-2258 Motorised Currency Detector is the quickest and most accurate method of detecting forged notes at the point of sale. When a valid note is passed through the machine, the value of the note will be displayed on the screen. The machine also counts the quantity and value of the notes being checked.

Detection Technology

The DP-2258 uses ICD (Intelligent Code Detection) to search for a code hidden inside the security thread. It also uses Magnetic & Infrared Ink Detection and Paper Quality & Thickness Sensors to determine whether a note is genuine or counterfeit.

If a counterfeit note is passed through the machine, it will be rejected, an alarm buzzer will sound and the machine will not display a value.

Specifications

- Easy to operate; any direction and any side of the note can be read.
- ICD, MG, MT, IR, Paper Quality, Paper Thickness
- High Speed: 0.5 Secs/Note.
- Multi-Currency: Euro(Standard) + 1(Optional).
- Denomination & total notes indicator.
- Small and compact; ideal for businesses where counter space is tight.
- 100% in ECB Euro Counterfeit Test.
- Software can be updated via USB port.
- Rechargeable lithium battery for portable usage.
- Weight: 0.7 kg
- CE, REACH & ROHS compliant.
